Open Source commitment since 2005

Corporate Philosophy

Committed to the open source community and technologies, OpenStudio has carried out more than 400 web projects. Editor of thelia, our technical expertise on this open source CMS designed for customized development solutions, allows us to offer our customers e-commerce website with scalable features that adapt perfectly to their needs.

Use-cases

Since 2005, thelia has run hundreds of online sales sites in France and abroad. With its REST API and templating system, Thelia adapts to many issues: link with ERP/CRM, web2store, click & collect, store picking, drive, B2B, multisite, PIM, marketplace, cash register software, etc.

Since 2010, we have been developing the main platforms to collect energy saving certificates (CEE). In 2020, we have initiated a major technological enhancement with the implementation of microservices environment based applications.

AI future of OS

Attentive to the evolution of the sector, we have also developed an "AI for e-commerce" offer. The integration of artificial intelligence bricks is a way for companies that trust us to optimize as much as possible the performance of their web platform or e-commerce website.

OpenStudio has experts in artificial intelligence to support its customers in automatic natural language processing (NLP), optimization under constraints, anomaly detection or even the design of digital twins.

Open Source

OpenStudio promotes open source projects so that other agencies can benefit from our work, reducing software obsolescence and emphasizing the idea of a shared economy, ensuring data sovereignty for our users.

Transfer of intellectual property

OpenStudio facilitates strategic autonomy, therefore the ability to decide, to choose the right technologies and to be autonomous.

Thelia AI

Thelia is infinitely expandable and with thelia.ai, OpenStudio now offers all companies, including small and medium-sized ones, the opportunity to develop their business on the internet, taking advantage of the performance of cutting-edge technology.

Based on a lambda architecture (big data oriented architecture, under Hadoop / Spark), we can now offer the following functionalities : a recommendation engine, an order prediction tool, a dashboard to monitor product performances and marketing automation tools.
